SUMMARY

Mamram alumni with 10 years of experience in software development. Passionate about new technologies, self-driven, and a strong team player. Seeking a challenging Senior Full Stack Developer position.

EXPERIENCE

Senior Full Stack Engineer & Solutions Consultant

Independent Consulting

2023 - PRESENT

- Delivered full-stack development and ETL solutions for a leading healthcare company (Fortune 20), designing and implementing scalable systems and data pipelines, ensuring optimal performance and seamless integration across various platforms.
- Acted as a hands-on consultant for a well funded startup, advising and developing complex application solutions, identifying and solving critical performance issues.
- Led the design, development and migration of legacy applications to modern cloud-based architectures (AWS + GCP), significantly improving system scalability and performance, which contributed to major business growth.
- Led the formation of DevOps and NOCC teams for clients, implementing CI/CD pipelines, automating workflows, and establishing agile practices to create efficient development processes in collaboration with product managers, QA, DevOps, and UI/UX designers.

Senior Software Developer

theGist.ai

2022-2023

- Helped found theGist.ai, a generative AI startup that raised \$7M as one of the first hires, contributing to the development of versatile architectures, including monolithic and microservices systems, as well as leading the frontend development across various applications and technologies.
- Worked with a diverse and evolving tech stack, including Go, Node.js, Python, Terraform, PostgreSQL, Redis, and various AWS services, adapting quickly to meet startup needs.
- Played a key role in optimizing system performance, ensuring high scalability, and implementing frontend design and development needs, contributing to the overall architectural vision of the startup using various FE technologies like Electron, Mobx, React, Typescript and React-Native.

Full Stack Engineer

Investing.com

2020-2022, Tel Aviv, Israel

- Contributed to the redesign and rebuild of the website, focusing on a scalable microservices architecture and mobile-first approach, while improving SEO performance metrics.
- Introduced and implemented cutting-edge technologies such as React, TypeScript, Next.js, and MobX to build high-performance, maintainable codebases.
- Contributed to deploying the website to Google Cloud Platform (GCP), ensuring scalability and high availability, while developing CI/CD pipelines to automate deployment and improve build efficiency.
- Acted as SCRUM Master, implemented analytics tools to drive data-driven decisions, and led the design and development of new features that significantly increased revenue and user retention.

Full Stack Engineer

Ofek 324 Unit - IAF

2013-2019

- Designed and developed a large-scale, permanently-available microservices system to replace a legacy system, focusing on performance, scalability, and reliability, which resulted in reduced downtime and improved system usability.
- Development of Angular web application with Java 8 backend server.
- Solving significant and complex performance issues with broad impact on the system (both front-end and back-end).
- Development and maintenance of a complex, widely used, mission-critical, and permanently available Client-Server JAVA system.
